

SUBRAMANIAN S V

Full Stack Developer | 3+ Years of Expertise in PEAN Stack

Chennai, India.

Summary

Full Stack Developer with 3+ years of experience in PostgreSQL, Express, Angular and Node.js (PEAN stack) skilled in building scalable, high-performance and responsive web applications. Proven ability to deliver high-performance solutions, automate workflows, and enhance user experience. Adept at delivering enterprise dashboards, order management systems and analytics with strong problem solving skills.

Work Experience

Comcast - Chennai, India | Development Engineer 2

May 2025 – Present

- **Contributed to the Umbrella configuration platform**, focusing on backend development and configuration setup to support scalable and reliable functionality.
- **Implemented, fixed, and enhanced features** by actively working on Jira-based development tickets aligned with sprint objectives and priorities.
- **Collaborated with cross-functional teams** through daily stand-ups and weekly sync meetings, ensuring smooth coordination and project alignment.
- **Supported application environment configuration and debugging**, ensuring seamless system integration and timely task delivery within Agile workflows.

Resileo Labs LLP - Chennai, India | Software Engineer

Sept 2021 – Apr 2025

- **Developed responsive, user-friendly web applications** using HTML, CSS, and TypeScript-based frameworks like Angular, ensuring they met high business standards, functional requirements, and maintained cross-browser compatibility through rigorous testing and optimization.
- **Led a team of two junior developers**, promoting collaboration and timely delivery, while managing codebase changes via Git, participating in Scrum ceremonies, and contributing to code reviews, debugging, unit testing, and technical documentation.
- **Enhanced and maintained existing applications** with a focus on high performance and reliability, achieving a 90% improvement in load times, and suggested functional and performance optimizations within existing methodologies.
- **Implemented job scheduling systems using Node Cron** and created interactive data visualizations with D3.js to support analytics and data-driven insights across the platform.

Education

- **Bachelor of Engineering (Electronics & Comm.)** - Jul 2017 – Aug 2021
Rajalakshmi Institute of Technology, Chennai

Certifications

- Python for Data Science (Silver Elite) – NPTEL (**Jan 2021**)

Skills

Frontend: Angular, React.js, HTML, CSS, Bootstrap

Backend: Node.js, Node Cron (job scheduling), Express.js

Database: PostgreSQL, MongoDB

Programming Languages JavaScript (ES6+), TypeScript, Python

Tools & DevOps: Git, Jira, Vercel, Netlify, AWS (Basic EC2, S3, Watch Cloud)

Projects

Project Title: WakaTech - Integrated Purchase Order and Shipment Management System.

Role: Full Stack developer

Technologies Used: Angular, Node.js, Express.js, PostgreSQL, Node cron

Description: This project involved the development of a comprehensive web-based platform designed to streamline the management of purchase orders, shipment bookings, and carrier services. The system aimed to provide a seamless and efficient solution for handling the entire lifecycle of order fulfilment, from the placement of purchase orders to the booking and tracking of shipments.

Key Features:

- **Purchase Order Injection:** Allows users to create, update, and track purchase orders. Developed system which includes automated injection of orders based on schedule along with validation of file and data to reduce the manual process by 80%.
- **Shipment Booking:** Facilitates the booking of shipments with various carriers. Users can select carriers based on criteria such as cost, delivery time, and service type.
- **Carrier Services Integration:** Supports integration with multiple carrier services (e.g., FedEx, UPS, DHL) to provide users with a comprehensive range of shipping options.

Key Contributions:

- **Responsibilities:** Designed and implemented the front-end using Angular, ensuring a responsive and user-friendly interface. Developed REST APIs with Express.js and Node.js to handle data transactions and business logic.
- **Challenges Overcome:** Optimized database queries in PostgreSQL, resulting in a 40% reduction in response time for user searches.
- **Collaboration:** Worked closely with a team of 8 developers, 1 designer, and 1 project manager to deliver the project on time and daily Scrum meetings to improve application business needs. Conducted code reviews and provided mentorship to junior developers.

Project Title: Thurro - An Insight Revolution

Role: Full Stack developer

Technologies Used: Angular, Node.js, Express.js, PostgreSQL, D3.js

Description: Thurro is an advanced market intelligence platform that aggregates unstructured data from multiple sources and presents it in a visual format. The platform aims to streamline the data discovery workflow and significantly reduce the time spent on data analysis and reporting by 90%. Thurro provides users with powerful tools to create personal boards, track sectors and companies, and collaborate with team members, enabling more informed decision-making processes.

Key Features:

- **Data Aggregation:** Collects and consolidates unstructured data from various sources, transforming it into structured insights.
- **Personal Boards:** Allows users to create customized boards to track specific sectors, companies, and market trends.
- **Collaboration Tools:** Facilitates team collaboration by enabling users to share boards, insights, and analysis with colleagues.
- **User Roles and Permissions:** Implements a robust user management system that assigns roles and permissions to ensure secure access to various functionalities based on user roles (e.g., admin, analyst, viewer).
- **Reporting and Analytics:** Generates detailed reports and analytics on tracked sectors and companies, offering export options for further analysis and sharing.
- **Admin Analytics Dashboard:** Provides a comprehensive analytics dashboard for administrators to monitor platform performance, user engagement, and data insights.

Key Contributions:

- **Responsibilities:** Designed and implemented the front-end using Angular, ensuring a responsive and user-friendly interface and crafted REST APIs with Express.js and Node.js to facilitate data transactions and manage business logic.
- **Challenges Overcome:** Optimized database queries using click house, resulting in a 80% reduction in response time for user chart filtering and analysis.
- **Collaboration:** Worked closely with a team of 4 developers and 1 project manager to deliver the project on time and daily Scrum meetings to improve application business needs.
- **Achievements:** Successfully launched the platform, resulting in a 30% increase in user productivity and efficiency. Created interactive data visualizations with D3.js to provide insightful market analytics to users.
